TRANSACTION INTERMEDIARY APPARATUS, METHOD AND SYSTEM WITH NEGOTIATION CAPABILITY FOR TRANSACTION OF GOODS OR SERVICES THROUGH COMMUNICATION NETWORK

Abstract of the Disclosure

A transaction intermediary apparatus, system and method with a negotiation capability promote trade of goods or services between buyers and sellers for achieving buyer driven transactions including transactions resulted from negotiation requests initiated by buyers. The apparatus receives first and second offer data of goods or services provided by sellers where the second offer data has conditions more beneficial to buyers in price or quality than that of the first offer data. The apparatus receives purchase conditions requested by a buyer and offers, in response, the first offer data to the buyer, receives a negotiation request from the buyer, and offers the second offer data in response to the negotiation request.
